

# NEW FROM URC

## Whole House 2-Way Network Control

Sneak preview of URC's product roadmap reveals emphasis on whole house 2-way IP control

The KP-4000 is a CEDIA 2009 "Best New Technology" Winner!

MRX-1

The PSX-2 is a CEDIA 2009 "Best New Product" Finalist

**L**EGIONS OF CUSTOM INSTALLATION professionals — like yourself — stand behind URC products because of their high quality, reliability and innovative features. And now, URC extends control to the whole house with a lineup of new products that will help you master the network. The MX-5000 is available now for immediate delivery. The KP-4000 and MRX-1 will be playing soon at a home theater near you.

### FORM FOLLOWS FUNCTION: MX-5000

The MX-5000 is a 2-way wand-style touch screen color remote that provides network control of many popular IP-based components. In addition to its stunning design it offers a fully customizable GUI on a large color screen that sends vibrating "haptic" feedback confirming each button selection.

### KEYPAD THAT'S NATIVE TO THE NETWORK

The KP-4000 is a 2-way touch screen network keypad that provides pre-built 2-way modules (no scripting required!) for IP cameras, A/V servers, home theater/multi-zone receivers, thermostats and whole house lighting.

### 2-WAY NETWORK BASE STATION: MRX-1

The MRX-1 is a true bridge between the network and IR, RS-232 and relay-controlled devices. In addition, it provides 2-way status and feedback via RS-232 and a voltage/video sensor to network keypads and remotes.

### PERSONAL A/V SERVER: PSX-2

CE Pro editor Julie Jacobson called it "the best product of CES 2009." The PSX-2 turns any iPod into an advanced A/V server with onscreen GUI. It provides 2-way on-TV content browsing and selection with cover art plus hundreds of discrete IR commands that enable "one touch to music" programming. It also offers on-remote GUI when installed with URC's award winning MX-6000, MX-5000 or KP-4000 keypad.
